SUMMARY

Senior Product Manager with 14+ years of experience leading end-to-end product lifecycles, specializing in legacy systems modernization, internal platforms, and B2B/GovTech scale (22,000+ organizational users). Expert in leveraging AI-assisted workflows and agentic frameworks to accelerate time-to-market and maximize operational efficiency. Proven track record of turning highly frictioned processes into scalable, self-service digital products. I am fluent in English (C2) and Spanish.

EXPERIENCE

Senior Product Manager 2020 - Present

INAES - National Institution of Associativism and Social Economy, Buenos Aires

Responsible for product strategy, roadmap definition, stakeholder alignment and delivery across critical data systems. Full decision ownership at every stage of the product process.

Institutional AI Program

I designed the product vision and business case for the institution's internal AI governance program, achieving executive management approval to position it as the priority technology initiative for the next 12 months.

- I established the product architecture framework and phased validation strategy for agent deployment and LLM implementation in 20 operational areas, defining a high-complexity pilot to test accuracy against a ground truth corpus before massive scaling.
- I structured the program's success metrics to focus on process efficiency, projecting a 10x reduction in manual analysis workload to redirect internal talent to high-complexity tasks.

Data Platform Transformation / Legacy Modernization

- I led the Product Discovery process and end-to-end roadmap for the migration from a file-based architecture to a real-time transactional platform, impacting a critical base of more than 22,000 user organizations.
- I strategically aligned cross-functional stakeholders (legal, operations, engineering) to execute a frictionless, zero-downtime transition of critical systems.
- I achieved a measurable impact on platform efficiency: 100% elimination of file-based workflows, +25% speed in data loading, -12% in error rate and a 35% reduction in operational support volume.

AI-Powered Document Extraction Tool

- I reduced the user processing cycle from 7 days to less than 5 minutes by designing and launching an AI-powered self-service tool, using assisted development methodologies and rapid prototyping to dramatically accelerate time-to-market.

Product Manager and Designer 2017 - 2020

INAES - National Institution of Associativism and Social Economy, Buenos Aires

I independently led the complete (end-to-end) lifecycle of the internal tool suite and the institutional intranet, assuming full ownership of scoping, feature prioritization, and delivery without higher management layers.

- I redesigned the internal directory system, optimizing the user experience (UX/UI), directly managing conversations with key stakeholders and the deployment strategy to ensure internal adoption.
- I boosted long-term technological efficiency by leading the strategic migration of the development stack to more maintainable architectures (React/Python), reducing the technical debt of the legacy system.

Data Analyst 2011 - 2017

INAES - National Institution of Associativism and Social Economy, Buenos Aires

I led the modernization of internal reporting systems and data flows nationwide, transforming isolated manual processes into self-sustaining analytical tools.

- I assumed the overall direction of the institutional digitization project a few months after joining, restructuring an operational data entry flow towards a scalable and decentralized data architecture solution.
- I designed and implemented an autonomous data loading framework, eliminating the dependence of the Human Resources team on the technical area and giving them total operational independence.
- I automated the entire national reporting pipeline for payroll accreditation, staffing, and project progress, developing integrated solutions that reduced a multi-stage manual process to a one-click execution.
- I reduced the report processing and delivery cycle by 50% for the analyst team, mitigating operational risk and accelerating data-driven decision-making at the federal level.

Web Designer & Developer 1999 - 2011

Freelance

I began my career as a freelancer at the age of 14, managing the entire process from client relations and requirements definition to the technical deployment of web solutions since 2000. Designed and developed custom digital products for various business models, continuously adapting the technology stack (HTML/CSS, PHP, WordPress, Shopify, WooCommerce) to align the system's capabilities with each client's strategic needs. I also acted as a cutting-edge technical and product consultant, prioritizing usability, operational efficiency, and platform scalability to maximize clients' return on investment.

Founder, NDZ Labs (Independent, Part-Time) 2025 - Present

I founded an independent product research lab focused on designing, prototyping, and validating modular operating systems for traditional industries, applying AI agent-based architectures.

- I reduced product execution and experimentation cycles by 40% by implementing an automated "agent squad" dedicated to accelerating the design, development, and execution workflows of automated A/B testing.
- I designed and launched an MVP of a management and appointment booking platform for small businesses (beauty centers, hairdressers, tattoo studios), leading the product discovery and currently managing the validation phase with the first 5 active users.
- I designed and piloted a modular medical/dental operating system from start to finish, structuring the data and product architecture to allow for future scalability and cross-industry adaptation.

CORE COMPETENCIES

Product	Product Strategy, Roadmapping, Product Lifecycle, KPI-Driven Decision Making, Product Discovery, OKRs, User Stories, Go-to-Market
AI and Automation	LLM Fine-tuning, AI-assisted Development, Process Automation
Design	UX/UI, Figma, Adobe XD
Leadership	Stakeholder Management, Cross-functional Leadership, Sprint Planning, Agile, Scrum
Data and Analytics	SQL, Amplitude, A/B Testing, Excel, VBA, Data-driven Decision Making
Technical	System Design, API-based Architectures, React, Python, Django, Web Applications
Tools	Linear, Jira, Notion

EDUCATION AND CERTIFICATIONS

Product Management Fundamentals *(In Progress)* - University of Maryland / edX
UX/UI Design Certification 2025 - City Government of Buenos Aires
Continuous self-directed learning in web development, product design and data analysis since 1999.

LANGUAGES

Spanish: Native
English: Fluent, C2 (EF SET)
